

SPORT FISHING IN ILLINOIS

The purpose of this guide is to help the angler realize more fully the opportunities available for sport fishing in Illinois. All of the Department of Natural Resources fishing areas are included, together with a complete directory of streams and lakes in every county where sport fishing may be enjoyed.

In order to acquaint everyone with the most important fish to be found in Illinois waters. thirty-one illustrations are presented with detailed descriptions to aid in identification of the species to be encountered.

Daily catch records obtained from census of angler success also reveal that nearly 90 percent of those who fish either catch only a few fish or no fish at all. This lack of success is caused by a lack of "know how" among fishermen - either in selecting the spots to fish, or in methods of luring the fish. To become proficient in any endeavor it is necessary to expend a great deal of effort. This is definitely the case in fishing, for in almost every instance, it has been found that the angler who repeatedly comes home with limit catches or large fish invaribly spends long hours at the sport, fishes several times each week and has learned the best locations for good fishing, the best time of day to fish and type of bait or baits most often successful.

The fisheries program of the Department of Natural Resources is designed to provide more and better opportunities for fishing, and insofar as possible, assist the angler in locating the right places where fish can be caught.

Illinois has over 1.6 million acres of surface waters. Nearly two-thirds of this acreage is contained in the Illinois portion of Lake Michigan (976,640 acres). Approximately 26,440 miles of rivers and streams (325,000 acres) are found throughout the state. These streams are classified by width categories as follows:

43,200 acres 5-30 feet wide 20,000 miles 31-100 feet wide 26,200 acres 3,900 miles 101-300 feet wide 1,030 miles 18,000 acres 301 plus feet wide 1,513 miles 237,600 acres

The three largest man-made lakes in Illinois were constructed by the U.S. Army Corps of Engineers, These reservoirs total 54,580 acres and are composed of:

> Carlyle Lake 24,580 acres 11,100 acres Laké Shelbyville Rend Lake 18,900 acres

Illinois has 88,414 impoundments covering 256,619 acres. Of these, 3,084 are classified as lakes of six acres or more in size. The remainder (85,330) are classified as ponds. Impoundments may be grouped by ownership categories as follows:

State Owned 472 impoundments 39,839 acres Publicly Owned 734 impoundments 79,277 acres 87.208 impoundments 137,503 acres Privately Owned

Over 90% of the state's surface water acreage (1.4 million acres) is open to public fishing. Privately owned waters, however, are under the control of the owner and permission must be granted in order to fish these areas.

The fishing areas described herein as available to the public were provided by Illinois Department of Natural Resources Fishery Biologists. These water areas consist of both public and private ownership and the future status of allowign public usage is at the discretion of the controlling authority, and not necessarily the Department of Natural Resources.

A special note is made in regard to stream fishing. MOST STREAMS ARE IN PRIVATE OWNERSHIP and the only available public access is at bridge crossings and along public right-of-ways. In case of doubt, inquire and request permission for access in order to prevent any undesirable or embarrassing situations from arising.

ACKNOWLEDGMENTS

Most of the drawings of fish were taken with permission from the book "lowa Fish and Fishing" by James Harlan and Everett Speaker, published by the lowa Conservation Commission. The data on the fishing waters were collected by Department of Natural Resources Fishery Biologists.

The Illinois Department of Natural Resources receives Federal financial assistance and herefore must comply with the federal anti-discrimination laws in compliance with the linois Human Rights Act, the Illinois Constitution. Title VI of the 1994 Givit Rights Act. Section 504 of the Rehabilitation Act of 1973 as amended and the U.S. Constitution the Illinois Department of Natura Resources does not discriminate on the basis of race color sex national origin age or disability. If you believe you have been discriminated against in any program activity or raci vity prease contact the Equal Employment Opportunity Officer Department of Natural Resources 524 S. Second St. Springfield it. 62701-1787, 1217-782-7616 or the Office of Human Resources. U.S. Fish & Wildlife Service. Washington D.C. 20240.

MAJOR SPORT FISHING AREAS AND PUBLIC BOAT LAUNCHING RAMPS IN THE ILLINOIS PORTION OF LAKE MICHIGAN

Best fishing for perch and smelt along shoreline areas such as harbors, piers, and breakwaters. Salmon and trout fishing is best in open lake from a boat and also from the shore during the spring, fall, and winter.

LAKE MICHIGAN SPORT FISH CONSUMPTION AD-VISORY — Some sport fish found in the Illinois waters of Lake Michigan may contain one or more chemical contaminants at levels of public health concern. Contaminant levels have been declining in fish from Lake Michigan in recent years but anglers are advised to follow the guidelines in the Lake Michigan Sport Fish Consumption Advisory which is available where sport fishing licenses are sold.

ILLINOIS PORTION OF LAKE MICHIGAN (Figures Indicate Depth in Feet)

*Charter boat services are available on Lake Michigan at several locations. Call the Illinois Department of Natural Resources in Des Plaines at 708/294-4134 for more information.

FISHING FOR THE COMMERCIAL FISHES

Illinois has a long and colorful history of commercial harvest of fishes for food. Prior to 1920, all native fishes were viewed wholly as an important food resource, vital to the development of a growing nation. Lake trout, yellow perch, chubs, walleye, black bass, pike, crappie, sunfishes, carp, buffalofishes, drum, suckers, sturgeon, paddlefish, catfish and bullheads, were all harvested commercially.

Except for the Columbia River basin, the State of Illinois was the leading producer of freshwater food fishes nationwide from 1905-1918. According to a U.S. Fish Commissioner's report, over 24 million pounds of food fish were harvested by Illinois commercial fishermen in 1908. In addition to supplying local and regional food demands, these fish were also shipped to the larger cities of the nation such as New York, Boston, Philadelphia, San Francisco, St. Louis and Chicago.

Illinois' prominence as a leading fish producer began to fade with time. Shortly after 1918, the leveeing and draining of bottomland areas, construction of dams for navigation, and dumping of waste products caused the rapid degradation of both water quality and fish habitat. By 1931, Illinois' commercial harvest declined to 12 million pounds.

The tonnage of fish annually harvested continued to decline with the increase in production of row crops continuing the degradation of both fish habitat and water quality. By 1976, the commercial harvest fell to an all time low of only 3.6 million pounds.

In the early 1970's strict environmental protection legislation was passed by the U.S. Congress into law in an effort to improve national water quality in streams and rivers. As water quality improved in the late 1970's and early 1980's, the commercial fish harvest gradually increased from 4.6 million pounds in 1980 to 7.4 million pounds having a wholesale value of 1.9 million dollars in 1986. The commercial

fish harvest has slowly declined since 1986 down to 5.2 million pounds having a wholesale value of 1.5 million dollars in 1993. This decline has primarily been due to decreasing markets.

Although abundant populations of the commercial rough food fishes are found in many of our lakes and streams, few anglers seek these species, either because of a lack of knowledge of how to catch them or because of misconceptions. Some anglers believe these fish are "rough or trash" fish, unsuitable in terms of both eating or sporting qualities. Such is far from the truth!

While some commercial species may not provide the thrilling surface thrashing fight of a bass or muskie and their flesh is not as delicately flavored as a walleye or crappie, they are definitely good eating and capable of providing a good angling battle. Commercial species, such as carp, buffalo, gar, bowfin, paddlefish and sturgeon, in addtion to the better known sport-commercial species such as drum, catfish and bullheads, can be sporting quarry for any angler, from the fly fishing purist to those who prefer surf tackle to catch the big one.

For the angler who wishes to explore fishing for the commercial species, there are a number of carp tournaments held throughout the state each year. Anglers who wish to try the eating qualities of the commercial fish species can do so by visiting the fish markets along our rivers. In addition, anglers can take advantage of the special commercial fish programs held on such state and federal waters as Carlyle, Rend, Anderson and Rice Lakes to become more knowledgeable about commercial fishing. So the next time you find fishing slow for the regular sport species or want to test your skill on a new angling species, discover the benefits of catching and eating our native commercial food fishes. Nothing ventured — nothing gained.

NUMBER (miles) and ACREAGE of

IMPOUNDMENTS* and STREAMS in EACH ILLINOIS COUNTY - 1993

-Includes all state, public, and private lakes and ponds 0.1 acre and larger in surface area.

THE ILLINOIS HATCHERY SYSTEM

The Illinois Hatchery System is composed of four facilities that range from near Wisconsin to near Kentucky in location. The hatcheries involved are Spring Grove Fisheries Resource Center, in McHenry County near the Wisconsin Border; LaSalle Hatchery, in LaSalle County near Marseilles; Jake Wolf Memorial Fish Hatchery, in Mason County near Pekin; and Little Grassy Fish Hatchery, in Williamson County near Carbondale. The statewide distribution of the four hatcheries allows them to complement and supplement each other, while giving great latitude in rearing a wide variety of species and aiding in the distribution of fish throughout the state. At full capacity the system is capable of producing over 50 million fish of 18 species.

Fish production and stocking procedures in Illinois have progressed greatly from the late 1800's when workers would rescue stranded fish from the recently flooded Illinois and Mississippi River bottom lands and distribute them across the State by train. One of the first important steps leading from fish salvage to fish culture was construction of the Spring Grove Hatchery in 1914. Primarily sunfishes and basses have been reared at this facility utilizing the seven ponds which total 24 acres of water. In 1971 it was developed into a salmonid station to help the State meet its Lake Michigan salmon stocking commitment. With the development of the Jake

Wolf Memorial hatchery and its salmon rearing facilities in 1982, Spring Grove has been devoted to collection and incubation of walleye and muskie eggs from the nearby Fox Chain of Lakes.

In 1959 the second important step towards increased fish production occurred with the construction of Little Grassy Hatchery. This facility with 18 ponds and 19 acres of water produced bluegill, redear, other sunfishes, largemouth bass, and collected and incubated walleye eggs from the southern part of the State.

Despite the earnest efforts of workers at Spring Grove and Little Grassy, demands and needs for stockable fish far exceeded production. Also the supply of fish from the Federal government decreased, as they phased out many of their hatcheries which had been sources of fish to Illinois. To ensure a steady supply of the right types and sizes of fish, the Department embarked upon the giant undertaking of renovating and expanding Little Grassy Hatchery and building Jake Wolf Memorial Fish Hatchery. Funding for construction was provided from State of Illinois Capital Construction Bonds. These bonds are being retired from annual payments made from the Department's Wildlife and Fish Fund via the sale of fishing licenses and a grant from the U.S. Department of the Interior.

Spring Grove Hatchery Building

Little Grassy Hatchery Building

Raceways and Ponds at Little Grassy Hatchery

The major expansion and modernization of Little Grassy Hatchery began in July 1979 and was completed in August 1981. Fish production is now accomplished using a combination of extensive pond culture in 21 earthen ponds totaling 19 acres and intensive fish culture which produces fish at high densities in flowing water in 20 indoor tanks and 18 outdoor concrete raceways. Due to design flexibility, the hatchery is capable of producing 12 cold, cool, and warm water species, but not simultaneously. A Visitors Center was also added during this expansion.

In 1989, additional construction was completed for a pumpback water system that maintains the high water flows needed for intensive fish production. Further construction completed in 1991 reshaped ponds, and added an intensive culture room to the hatchery for additional rearing units.

Construction of the Jake Wolf Memorial Fish Hatchery commenced in December 1979 and was completed in 1982. The ultra-modern hatchery encompasses 160 acres of Sand Ridge State Forest in Mason County and is capable of rearing 16 species of cold, cool, and warm water species simultaneously.

Phase I of a visitor center at Jake Wolf Memorial Fish Hatchery was completed in 1991, as well as an addition of 10 one acre rearing ponds and a maintenance storage building. Phase 2 of the visitor center was completed in 1994. The visitor interpretive center currently showcases fishery management in Illinois and the role that fish hatcheries play in management of the state's fishery resource. The visitor center also contains an antique fishing tackle display containing over 200 lures, and a "Harvesting the River" exhibit that depicts life on the Illinois River during the late 1800's and early 1900's.

Intensive fish culture at Jake Wolf Memorial Fish Hatchery produces fish in running water at high densities in both concrete raceways and plastic-lined ponds. Modern technological advances such as water flow alarms; temperature, oxygen and disease control systems; and water pumping and waste water treatment facilities are essential components of this hatchery. Included in this complex are: a 36,000 square foot hatchery building

with State offices; a pathology lab; incubation room; 56 tanks; 28 rearing raceways; 7 brood raceways; 6 quarantine raceways; 22 ponds; and, a 22 acre reservoir. Water for the entire facility is supplied by 10 wells that can deliver 8,000 gallons per minute from the Mahomet Aguifer.

Jake Wolf Memorial Hatchery was dedicated in honor of the late Jacob John "Jake" Wolf. Jake Wolf at the time of death was serving the sportsmen and sportswomen of Illinois as Deputy Director of the Department. His seven terms in the Illinois General Assembly were marked with the passage of numerous conservation bills that benefitted Illinois sportsmen and sportswomen.

Jake Wolf Hatchery Building

Ponds and Raceways at Jake Wolf Hatchery

LaSalle Hatchery

The Illinois Hatchery System is playing a major role in improving the quality of fishing in Illinois. Since 1984, 358,216,944 fish have been produced by the system and stocked into Illinois lakes, ponds, reservoirs, and streams. Specific benefits that Illinois anglers are receiving include:

- Enhanced salmonid fishing in Lake Michigan;
- Statewide fisheries for trophy fish such as muskellunge, tiger muskie, striped bass and hybrid striped bass;
- Increased opportuntities for catching large and smallmouth bass and walleye;
- Expansion of the channel catfish program;
- Increased stocking of public and private waters statewide.

The Fish Illinois Initiative enabled the Department to assume responsibility of the LaSalle Hatchery in

1994. The hatchery was previously operated by Southern Illinois University as a research/hatchery facility. The facility consists of 16 rearing ponds which total 35.5 acres of water. The hatchery is currently rearing six different species of fish.

The Illinois Hatchery System is dedicated to enhancing fish populations in Illinois waters by producing adequate numbers of various species of fish to meet stocking demands statewide. The Fish Illinois Initiative has allowed for increased fish production and added manpower that are essential to maintaining and enhancing the quality of fishing in Illinois' lakes, ponds, reservoirs, and streams. With this initiative, the Illinois' Hatchery System will continue to stock Illinois' waterways well into the next century!

Fishes of Illinois

COMMON NAMES:

Largemouth, bass, black bass, bigmouth bass, line side, green bass, lake bass,

bayou bass, green trout, Oswego bass, slough bass.

DESCRIPTION:

The upper jaw with the mouth closed extends well back of the eye. The spiny dorsal or top fin is separated from the soft dorsal by a deep notch. Dark green to black on the back, lighter green on sides, greenish to white on belly, dark lateral

stripe extends full length of body.

HABITAT:

Rivers, lakes and ponds.

DISTRIBUTION:

Occurs in most waters of the state.

COMMON NAMES:

Smallmouth black bass, black bass, smallmouth Oswego bass, bronzeback, redeye

DESCRIPTION:

The upper jaw extends to middle of eye. The spiny dorsal is nearly continuous with the soft dorsal. Lines radiate from snout and eye, vertical stripes or blotches on body.

HABITAT:

Swift moving rivers and streams.

DISTRIBUTION:

The smallmouth bass occurs naturally in the northern half of the state. However, it can be found in the large cooling lakes and other isolated lakes and ponds where

it has been stocked.

COMMON NAMES:

Kentucky spotted bass, Kentucky bass, speckled bass.

DESCRIPTION:

The upper jaw extends to middle of the eye. The tongue has teeth which the other bass do not have. The lower portion of the body has dark spots in rows.

HABITAT:

Small streams with pools and riffles.

DISTRIBUTION:

Occurs naturally in the small streams and rivers of southeastern Illinois.

GREEN SUNFISH

COMMON NAMES:

Green perch, sunfish, perch, black perch, creek perch, logfish, little redeye, creek

sunfish, rubbertail, sand bass, blue-spotted sunfish.

DESCRIPTION:

Has a large mouth, opercular flap black with a prominent coppery or purplish

margin, color of body is olive green with tail and anal fins with an orange or yellow

border.

HABITAT:

Sluggish streams and impoundments.

DISTRIBUTION:

Occurs statewide in all types of waters. It is found in most streams of the state.

BLUEGILL

COMMON NAMES:

Bream, brim, sunfish, sun perch,

prairie perch, strawberry bass, roach, blue bream,

pale sunfish, blackear bream.

DESCRIPTION:

Has a small mouth and a short black gill flap. The lower portion of the gill cover is

bluish. A distinct black spot is at the posterior end of the dorsal fin. Body

sometimes shows vertical bars.

HABITAT:

Sluggish streams and impoundments.

DISTRIBUTION:

Occurs statewide in all types of waters.

REDEAR SUNFISH

COMMON NAMES:

Redear, sunfish, shell cracker.

DESCRIPTION: Has a small mouth and a short

Has a small mouth and a short black opercular flap with red or orange margin. The pectoral fin is long and pointed. The body does not have dark spots or bars.

pectoral fill is long and politica. The body does

HABITAT: Sluggish streams, ponds and lakes.

DISTRIBUTION: Occurs statewide in ponds and lakes where stocked, but infrequently in northern

Illinois.

WARMOUTH

COMMON NAMES:

Goggle-eye, warmouth bass, mud bass,

weed bass, rock bass, wood bass.

stumpknocker, black sunfish.

DESCRIPTION:

Has teeth on tongue. The mouth is large and the body is robust. The body is

brassy mottled into dark brown and has 3 anal spines. The rock bass have 6.

HABITAT:

Impoundments, swamps and sluggish streams.

DISTRIBUTION:

Occurs statewide in all types of waters.

CHANNEL CATFISH

COMMON NAMES: DESCRIPTION: Fiddler, spotted cat, channel cat, catfish, blue cat, white cat, willow cat, lady cat. Body completely devoid of scales, has eight barbels or whiskers about the mouth, prominent adipose fin, a single hard spine in the pectoral and dorsal fins and a deeply forked tail. The channel catfish can be distinguished from the blue catfish by its rounded anal fin with 24 to 29 rays. The blue catfish has 30 to 35 rays in straight edged anal fin.

HABITAT:

Lakes, ponds and rivers.

DISTRIBUTION: Occurs statewide in ponds and lakes where stocked and naturally in large rivers,

BROWN BULLHEAD

COMMON NAMES:

Speckled bullhead, speckled cat, bullhead, marble cat, mudcat, bullpout, horned

pout

DESCRIPTION:

Robust body completely devoid of scales, has eight dusty barbels or chin

whiskers about the mouth. The brown bullhead has 20-24 rays in the anal fin and a

squarish caudal fin.

HABITAT:

Large lakes and rivers.

DISTRIBUTION: Occurs

Occurs naturally in the lower section of the Illinois River, the Mississippi River and

in the glacial lakes of northeastern Illinois.

COMMON NAMES:

Yellow-bellied cat, greaser, yellow catfish, white whiskered bullhead, Mississippi bullhead.

DESCRIPTION:

Body completely devoid of scales, has eight barbels or chin whiskers about the mouth. The straightedged anal fin has 24-27 rays, the chin barbels are yellow or

white, and the caudal fin is rounded.

HABITAT:

Lakes, ponds, and streams.Statewide in all types of waters.

DISTRIBUTION:

54

COMMON NAMES: DESCRIPTION:

Bullhead, yellow-belly cat, catfish, horned pout, stinger, river snapper, black cat. Body completely devoid of scales, has eight barbels or chin whiskers about the mouth. The short rounded anal fin has 17-20 rays, the chin barbels are black and the caudal fin is somewhat square and slightly notched at midpoint.

HABITAT:

Lakes, ponds, rivers and creeks. **DISTRIBUTION:** Statewide in all types of waters.

FRESHWATER DRUM

COMMON NAMES:

Grinder, bubbler, white perch, perch, sheepshead, croaker, grunting perch, drum, gaspergou, silver bass, gray bass.

DESCRIPTION:

The spiny and soft dorsal fins are continuous, eight or nine spines in the spiny dorsal fins, mouth is located near the bottom of head and the lower jaw is smaller than the upper jaw. Lateral line extends through the tail.

Large rivers and lakes.

HABITAT: **DISTRIBUTION:**

Occurs statewide but more commonly found in large rivers and cooling lakes.

COMMON NAMES:

German carp, European carp, mirror carp, scaleless carp, leather carp, buglemouth, carp.

DESCRIPTION:

Two pairs of barbels are located near the corners of the mouth, mouth opens downward, has one dorsal fin, and one sawtoothed spine located in dorsal and anal fins.

HABITAT:

Lakes, rivers and streams.

DISTRIBUTION:

This introduced fish occurs statewide in all types of waters.

COMMON NAMES: DESCRIPTION:

Tongue with

Blue nose perch, gray perch, sea perch, rockfish, striper, striped bass.

Dorsal fins separated, stripes distinct with first stripe below lateral line complete to tail. Second spine of anal fin distinctly shorter than third spine. Tongue with two

rear tooth patches.

HABITAT: Lakes and large rivers.

DISTRIBUTION: Occurs statewide via hatchery stockings into selected lakes and reservoirs.

COMMON NAMES: DESCRIPTION:

Striped bass, streaker,

2nd spine shorter than 3rd spine

silver bass, silver fish, striper.

Body bluish-white on sides with 6-7 horizontal dark stripes. The spiny dorsal fin is separate from the soft dorsal fin. Tongue with one central tooth patch. Second spine on anal fin distinctly shorter than third spine.

HABITAT:

DISTRIBUTION:

Large rivers, river bottomland lakes and large impoundments.

The white bass occurs naturally in the large rivers of the state including the Mississippi, Illinois, Rock, Fox, Kaskaskia and Wabash. Whites also occur naturally in the Fox Chain O' Lakes.

COMMON NAMES: DESCRIPTION: Sunshine bass, wiper bass, striper, striper hybrid.

Dorsal fins separated, stripes distinct and usually broken. Tongue with two rear

tooth patches. Second spine on anal fin shorter than third spine.

HABITAT:

DISTRIBUTION: Occurs statewide via hatchery stockings into selected lakes.

YELLOW BASS

Streaker, striped bass, barfish, black-striped bass, gold bass, brassy bass, striper.

2nd spine longer than 3rd spine

COMMON NAMES: DESCRIPTION:

Body has a yellow color, with black horizontal lateral stripes broken near the center of body length, the spiny dorsal fin is connected to the soft dorsal fin. There is no tooth patch on the tongue. Second spine on anal fin longer than third spine.

HABITAT: DISTRIBUTION: Rivers, lakes and ponds.

Occurs statewide but more commonly found in the large rivers of the state including Mississippi, Illinois and Fox Rivers. The yellow also occurs in river bottom lakes, glacial lakes in northeastern Illinois and large cooling lakes.

COMMON NAMES:

Calico bass, strawberry bass, crappie, specked perch, shiner, butter bass, silver bass, bitterhead, speckled crappie, spotted crappie, moonfish, barfish.

DESCRIPTION:

Anal fin almost the same size of the dorsal fin. Color pattern of irregular dark splotches on a light background. Best method of identification: black crappie has

7 or 8 spines in the dorsal fin.

HABITAT:

Large lakes, ponds and streams.

DISTRIBUTION:

Occurs statewide but more commonly in large river lakes.

WHITE CRAPPIE

COMMON NAMES:

Crappie, silver crappie, bachelor, new-light, pale crappie, ringed crappie, white bass.

DESCRIPTION:

Anal fin is almost same size as the dorsal fin. Color pattern of dark splotches arranged in vertical bands on a pale background. Best method of identification white crappie have 5 or 6 spines in the dorsal fin.

HABITAT:

Large lakes, ponds and streams.

DISTRIBUTION:

Occurs statewide in most types of waters but better populations can be found in large river lakes.

COMMON NAMES:

Perch, ringed perch, ringtail pech, lake perch, river perch, common perch, red perch, striped perch.

DESCRIPTION:

Body is yellow with seven dark bars or rings running from top to bottom.

HABITAT:

Rivers, river lakes and glacial lakes in northeastern Illinois.

DISTRIBUTION:

Can be found statewide but more commonly in the northern part of the state and Lake Michigan.

WALLEYE

COMMON NAMES:

Pike perch, walleyed pike, pike, jack salmon, jack, yellow pike, dory, glasseye, white-eye, blue pike, gray pike, green pike, okow, howfish, blowfish, gum pike.

DESCRIPTION:

Body is olive-brown with greenish-yellow reflections. Large glassy eye and dark spot at rear of spiny dorsal fin. Lower lobe of tail fin often white tipped.

HABITAT:

Large rivers, streams and river lakes.

DISTRIBUTION:

The walleve occurs naturally in the Rock River, Kankakee River, Illinois River, Fox River and northern portions of the Mississippi, Ohio and Wabash Rivers. This species has also been stocked into numerous impoundments throughout Illinos.

COMMON NAMES:

Sand pike, jack fish, jack salmon, river pike, spotfin pike, blue pike, ground pike, dory, gray pike perch, gray pickerel.

DESCRIPTION:

Body slaty or yellowish with 3 or 4 dusky saddles across back. Spiny dorsal fin

with half-moon spots.

HABITAT:

Large rivers.

DISTRIBUTION:

Occurs naturally in the large rivers such as the Mississippi, Illinois, Kaskaskia, Ohio and Wabash.

NORTHERN PIKE

COMMON NAMES:

Common pike, pickerel, great northern pike, northern, jack fish, pike, snake, snake

pickerel, jack.

DESCRIPTION:

Body elongated, somewhat flattened, head large with duckbill jaws supporting large canine teeth. Caudal fin and paired fins having rounded tips. Entire cheek and upper half of gill cover scaled. 5 or fewer sensory pores on each side of lower jaw. Coloration with pattern of horizontal rows of light round to eval spots on a

dark (usually greenish) background.

HABITAT:

Large rivers, marshes and glacial lakes.

DISTRIBUTION:

Occurs naturally in the northern third of Illinois and rather generally throughout the northern half of Illinois via hatchery stockings. It occurs in the Mississippi

River almost to the mouth of the Ohio River.

MUSKELLUNGE

COMMON NAMES:

Great Lakes muskellunge, muskie (musky), lunge, maskinonge.

DESCRIPTION:

Body elongated, somewhat flattened, head large with duckbill jaws supporting large canine teeth. Caudal fin and paired fins with pointed tips. Upper half of both cheek and gill cover scaled. 6 to 9 sensory pores on each side of lower jaw. Background coloration may vary depending on geographic location. Marking may

vary from clear to barred to spotted.

HABITAT:

River and lakes.

DISTRIBUTION:

Natural populations extiripated from Illinois. Occurs statewide via hatchery

stockings into selected lakes.

TIGER MUSKIE

COMMON NAMES: DESCRIPTION: Tiger muskie, muskellunge x northern pike hybrid, hybrid tiger muskellunge.

Bescription:

Body elongated, somewhat flattened, head large with duckbill jaws supporting large canine teeth. Caudal fin and paired fins having rounded tips. Two-thirds or more of cheek and upper half of gill cover scaled. 5 to 9 sensory pores on each

side of lower jaw. Coloration having irregular narrow vertical dark markings on a light background. Pattern never resembles that of northern pike.

HABITAT:

Lakes and rivers.

DISTRIBUTION:

Statewide via hatchery stockings into selected lakes.

COMMON NAMES: Silver salmon.

DESCRIPTION: Body more slender than chinook salmon. Black spots on back and upper lobe of

tail, teeth of lower jaw set in whitish gums. Anal fin rays are 12 to 15, has 45 to 83

intestinal appendixes.

HABITAT: Lake Michigan.

DISTRIBUTION: Lake Michigan.

COMMON NAMES: King salmon, spring salmon, tyee salmon.

DESCRIPTION: Body is deep, many spots on upper body and fins, including both lobes of tail, anal

fin ray count is 15 to 17, teeth of lower jaw set in blackish gums. Has 140 to 185

intestinal appendixes.

HABITAT: Lake Michigan.
DISTRIBUTION: Lake Michigan.

COMMON NAMES:

Great Lakes trout, salmon trout, gray trout, laker, togue, mackinaw.

DESCRIPTION: Pale colored worm-like markings over entire body. Tail is forked, anal fin rays are 9

to 12. The lower fins have white edgings.

HABITAT: Lake Michigan.

DISTRIBUTION: Lake Michigan.

RAINBOW TROUT

COMMON NAMES: Rainbow, steelhead, steelhead trout.

DESCRIPTION: Many small black or brown spots scattered along upper part of body and on tail.

Faint pink line along each side of silvery body; squared tail, inside of mouth white.

HABITAT: Cool lakes and streams.

DISTRIBUTION: Illinois streams and inland lakes have limited suitable water for rainbow trout.

They are abundant in Lake Michigan and maintained through an annual stocking of

catchable trout in selected Illinois inland lakes and streams.

BROWN TROUT

COMMON NAMES: Brown, brownie, German brown trout.

DESCRIPTION: Large spots along sides, the largest appearing as modified X's. Also some red

spots with blue halos. Squared tail without markings, inside of mouth white.

HABITAT: Cool lakes and streams.

Illinois streams and inland lakes have limited suitable water for brown trout. They DISTRIBUTION:

are abundant in Lake Michigan and maintained through an annual stocking

program by Illinois and other states.

COMMON NAMES: American smelt, smelt, freshwater smelt.

DESCRIPTION: The body is long and slender in shape. Length is usually less than ten inches. Body color is greenish gray along the back and silvery beneath. Much like trout and salmon an adipose fin is present and the mouth is large and well-rounded.

Lake Michigan. Usually found in deep, cold water except for spring spawning runs

along the shoreline.

Lake Michigan.

A BIG FISH Patch and Certificate will be awarded to the angler who catches and keeps a fish, only of the species listed above, which equals or exceeds the minimum qualifying weight.

A CATCH AND RELEASE Pin and Certificate will be awarded to the angler who catches and releases a fish, only of the species listed above, which equals or exceeds the minimum qualifying length

RULES

These rules apply to STATE RECORD, BIG FISH, and CATCH AND RELEASE entries:

- 1. Fish must be caught legally by pole and line from Illinois waters. Fish caught by trot line, jugs, bank poles, gigs, spears, bow and arrow, nets, seines, and snagging are not eligible.
- 2. Fish caught from Licensed Daily Fee Fishing Areas are not eligible.
- 3. Qualifying fish must be submitted individually on an official entry form within 90 days of being caught. If fishing alone, the witness verification section may be omitted for BIG FISH and CATCH AND RE-LEASE fish. All sections must be completed for STATE RECORD eligibility.
- 4. Each STATE RECORD entry must be accompanied by a clear, side-view photograph of the fish, preferably of the angler with the fish. Photographs of BIG FISH and CATCH AND RELEASE fish are not required.
- 5. Fish entered for a STATE RECORD award must be weighed on a scale certified legal for trade in front of two witnesses.
- 6. Total length is to be measured from the tip of the snout, with the mouth closed, to the tip of the tail to the nearest 1/8 inch. Girth is measured at the greatest distance around the fish (circumference).
- 7. A fish entered for STATE RECORD fish must be kept intact and frozen until it has been certified, and when necessary, genetically confirmed by an Illinois Department of Natural Resources Fishery Biologist.
- 8. The entry and photograph become property of the Illinois Department of Natural Resources. Photos cannot be returned.
- 9. The Illinois Department of Natural Resources reserves the right to reject an entry based upon its investigation of the identification, methods used in catching, and the accuracy of measurement and weighing.
- 10. The Illinois Department of Natural Resources reserves the right to reproduce, duplicate, or otherwise copy, via a body cast, any certified STATE RECORD fish. Duplicate mounts will be used solely by the Department for display purposes and will acknowledge the record holder.

The Illinois Department of Natural Resources is requesting this information as outlined under the Fish Code. Chapter 515. This information is voluntary, however, you must fill out and sign the form to qualify for a sport fishing award.

CATCH AND RELEASE FISHING

What is "Catch and Release Fishing"?

Catch and release fishing is the practice of returning fish back to the water quickly and in such a manner that the fish is likely to survive.

Why should anglers practice "Catch and Release Fishing"?

Fishing in Illinois is different now than it was 20 years ago. The number of anglers has increased dramatically during this period. Advancements in fish catching technology have also put increased pressure on the limited fishery resources.

As the growing number of anglers get better at catching fish, the big fish get caught faster than the water body can grow them, which means fewer and fewer big fish. The release of big fish back to the water can mean another angler might catch this fish again.

How should anglers catch and release fish in order to maximize the potential for the fish to survive?

Different species of fish have various tolerance levels for stress caused by being caught. For example, largermouth bass and walleye tend to expend their energy rapidly and seldom become seriously exhausted. Fish such as stripers, muskies and northerns are more sensitive to this type of stress and must be handled quickly to insure their survival upon release.

- Land the fish as soon as possible. Playing a fish until it is exhausted will cause it to build up lactic acid and will diminish its chances for survival.
- Refrain from using a dip net. Netting tends to disrupt the protective mucous covering the fish and that increases the possibility of disease once the fish is back in the water.
- No fish should be grabbed around the abdomen because the internal organs are

fragile. Handle toothless fish by gripping their lower jaw. Grab a fish with teeth behind the gill covers. Don't squeeze directly on the gill covers and never handle a fish by depressing its eyeballs.

- Wet your hands before handling a fish to reduce the loss of the fish's protective mucous coating covering its body.
- Handle the fish with care when removing the hook. Avoid excessive handling and don't drop the fish.
- Keep the fish in the water as much as possible during hook removal. Long-nosed pliers can be used to dislodge the hook while the fish is in the water.
- Don't attempt to remove the hook if it is lodged in the gullet or throat. Don't attempt to jerk or pull on the line to remove the hook. Simply cut your line and release the fish. Fish released in this manner stand a good chance of surviving.
- Never throw a fish back into the water.
 Gently place the fish into the water and let it swim away.
- To revive a fish, hold it upright and move it back and forth (gently) so the water is forced over the gill filaments.
- Never place a fish on a stringer if there is a
 possibility that you might release it. Aproperly
 aerated live-well or an ice chest filled with
 water and a little ice is better for holding fish
 temporarily.
- •To release lake trout taken from deep water, grasp the fish at the narrowing in front of the tail with one hand while supporting the body from underneath the head. Then, push the fish forcefully head-first down into the water towards the bottom. It is not necessary to deflate the air bladder by squeezing or puncturing with a needle.

On the other hand, if the fish is deeply hooked, and is legal to keep, the angler should keep and utilize the fish.

How does "Catch and Release Fishing" maintain good fishing and improve future angling opportunities?

Fish caught and released quickly and in a manner to maximize survival will be able to provide future anglers with a similar thrill. Released fish that live can be caught again. When anglers keep only those legal fish which are of trophy size or are intended to provide a meal, the fishery resource benefits. Released fish provide an "insurance policy" for the water body. Release of the unwanted fish caught provides for future anglers to experience quality fishing.

Not all water bodies or fish species benefit from "catch and release fishing". Restrictive length and creel limits usually indicate which fish species and water bodies potentially could benefit.

What can tournament anglers do to practice "Catch and Release Fishing"?

- ... Require all tournament anglers to use properly aerated live-wells. Maintain adequate dissolved oxygen levels in holding tanks (at least 5 parts per million).
- ... Weigh-ins should be held to minimize handling stress. Fish should be transported in perforated plastic bags and held in water troughs while waiting to weigh-in. Water temperature in the troughs should be maintained within 2-4 degrees of ambient lake or stream temperature.
- ... Refrain from holding fish when the surface water temperature exceeds 90°F (commonly July and August). Water temperatures above this level can result in unavoidable high mortality of held fish.

HOW TO MEASURE FISH

Use a flat board, close mouth, and compress the tail.
